### 1 Problem

Find the area of a rectangle  $ABCD$  with vertices  $A = \begin{pmatrix} -1 \\ \frac{1}{2} \\ 4 \end{pmatrix}$ ,  $B = \begin{pmatrix} 1 \\ \frac{1}{2} \\ 4 \end{pmatrix}$ ,  $C = \begin{pmatrix} 1 \\ -\frac{1}{2} \\ 4 \end{pmatrix}$ ,  $D = \begin{pmatrix} -1 \\ -\frac{1}{2} \\ 4 \end{pmatrix}$ .

### 2 Solution

Method 1: The adjacent sides of the rectangle are BA and AD (i.e. length and breadth). Area of a rectangle = length \* breadth = AD\*BA.

$$\begin{aligned} \text{AD} &= \text{A-D} \\ &= \begin{pmatrix} -1 \\ \frac{1}{2} \\ 4 \end{pmatrix} - \begin{pmatrix} 1 \\ \frac{1}{2} \\ 4 \end{pmatrix} = 1 \end{aligned}$$

Similarly, BA = B-A = 2. Thus, area = 1\*2 = 2 sq.units

Method 2: Area of rectangle = cross product of vectors of adjacent sides

$$\text{Side } \vec{AD} = \vec{A} - \vec{D} = \begin{pmatrix} 0 \\ -1 \\ 0 \end{pmatrix} \quad \text{Side } \vec{BA} = \vec{B} - \vec{A} = \begin{pmatrix} 2 \\ 0 \\ 0 \end{pmatrix}$$

$$\begin{aligned} \text{Area} &= \vec{AD} \times \vec{BA} = \begin{pmatrix} 0 \\ -1 \\ 0 \end{pmatrix} \times \begin{pmatrix} 2 \\ 0 \\ 0 \end{pmatrix} \\ &= \begin{pmatrix} 0 & -0 & 1 \\ 0 & 0 & 0 \\ -1 & 0 & 0 \end{pmatrix} \begin{pmatrix} 2 \\ 0 \\ 0 \end{pmatrix} = 2 \end{aligned}$$
